**VI- Reading Comprehension and Summary Making: ( 26 Marks )**

26

**-Read the following passage carefully, then answer the questions below:**

The Great White Shark is often gray, fairly blue and/or white below in colour. The largest Great Whites can reach lengths of 6.7 m and weigh up to 2267 kilos. It has massive teeth, which are positioned in rows and are usually sharp with a saw-toothed edge. When it attacks, it bites its prey and shakes its head back and forth. The sharp teeth act as a saw and literally tear the victim apart.

The Great White Shark normally feeds on fish, seals, dolphins, porpoises, otters, and turtles. It is thought to locate its prey by electro sense and by smell. Like all sharks, Great Whites have special surface skin called Ampullae of Lorenzini, which enable them to detect the \*electromagnetic fields radiated by moving organisms.

The White Sharks use several hunting techniques depending on the prey. Most of the time, the shark will remain underwater before attacking from below. In the case of hunting some kinds of seals, the impact is so powerful that it throws both the shark and the prey clear out of the water. With larger prey such as elephant seals, the shark will simply take a **huge** bite out of it and wait for it to bleed to death. When hunting dolphins, the shark will attack from above, to avoid the discovery of the dolphin's echolocation system.

Great White Sharks are most **commonly** observed throughout the world's subarctic coastal waters ( south of the Arctic Circle ) , though they likely spend most of their time in the open ocean. Highest concentrations are found in the waters off the coast of South Africa, Australia, California, and Mexico. The Great White Shark is also found in the Adriatic and Mediterranean Seas. They generally prefer water between 12 and 23 degrees celsius.

A Great White Shark has never been observed giving birth, however pregnant females have been caught. The Great White Shark is known to be “ovoviviparous” which means that their young are developed in eggs within the mother's body. Females give birth to eight or nine young puppies. It is thought that Great White Sharks live up to 40 year.

\*electromagnetic = having both electrical and magnetic characteristics (or properties)
